About

Senior Frontend/Product Engineer with 19+ years of experience building product-focused web applications, combining frontend architecture, UI systems, and product thinking to turn complex problems into clear, effective user experiences.

I work beyond implementation, helping define product and technical solutions, improving architecture, creating reusable UI patterns, and simplifying complexity to help teams move faster.

I've often acted as a frontend reference across teams, driving refactors, improving design-to-development workflows, and contributing to product, UX, and technical decisions.

INTERESTS

- Product-focused frontend engineering
- Frontend architecture & system design
- Design systems & reusable UI patterns
- AI-assisted development workflows
- Senior Frontend or Product Engineering roles with strong product and technical impact

Experience

Independent Product R&D & AI Consulting

Apr 2026 – Present

Senior Frontend/Product Engineer

- Designed, built, and launched TuLanding, a subscription product based on the hypothesis that custom landing-page development can become a repeatable service through AI and automation; implemented its create → preview → subscribe journey with Astro/React and Cloudflare.
 - Partnered with Juana Casa, an architecture studio, to identify where AI could improve access to project and operational knowledge; built an initial React/Next.js assistant with Mastra and RAG, then implemented specialized OpenAI Workspace Agents accessible through Slack and WhatsApp.
 - Extended the knowledge-access work beyond Juana Casa into a broader product direction; currently developing a reusable knowledge-intelligence layer with grounded RAG and an authenticated MCP server that gives AI assistants and agents source-backed access to company documents and structured operational data.
 - Currently developing an adaptive multi-model AI system investigating whether combining independent models can improve answer quality and factual reliability under practical cost and latency constraints; built a research lab using LangGraph, implementing 14 distinct multi-model workflows with support for multiple AI providers, validated the end-to-end pipeline on a small test run, and began an exploratory evaluation using a public factuality benchmark (AA-Omniscience).
 - Evaluated and refined AI-assisted product design and development workflows, combining coding agents (Codex, Claude Code, Cursor), design tools (Claude Design, OpenDesign, Pen), and agent orchestration across discovery, prototyping, implementation, testing, and review, with explicit human verification throughout.
-

Rotunda Software

Apr 2022 – Apr 2026

Senior Frontend Engineer · Remote

- Acted as the main frontend reference across the team, supporting developers in UI-related decisions and implementation.
 - Led the evolution of the internal UI library (ModUI), improving APIs, simplifying styling systems, and increasing consistency.
 - Drove large-scale frontend refactors, including migrations of multiple applications and marketing sites.
 - Built interactive documentation and standardized reusable UI patterns and styling conventions, improving onboarding, consistency, and design-to-development handoff.
 - Improved frontend tooling and local development workflows, reducing friction for the engineering team.
 - Collaborated with backend, design, QA, and marketing to define technical and product solutions, proactively identifying UX and implementation improvements.
 - Worked within a microservices-based architecture using a custom internal frontend framework, implementing Node.js and Express API endpoints to support frontend features.
-

BairesDev

Mar 2020 – Mar 2022

Senior Frontend Engineer · Remote

- Worked on Pinterest's Experiments team, implementing and testing React UI variations in the core consumer product to support product experimentation.
 - Developed and owned the UI layer of internal advertising reporting tools, defining their information architecture and data presentation.
 - Expanded into backend responsibilities, learning Go and implementing APIs to deliver features end to end.
 - Collaborated in distributed teams and participated in code reviews and testing.
-

Mapme

Nov 2016 – Dec 2019

Senior Frontend Engineer · Remote

- Helped evaluate and introduce Vue.js for a full product rewrite, then led the frontend implementation of the redesigned application from scratch.
 - Built a component-based architecture with Vue and Vuex, including reusable UI components designed for maintainability and scalability.
 - Collaborated closely with the CTO and CEO, translating business needs into practical, user-friendly UI solutions, often without formal designs.
-

Deviget

Dec 2013 – Apr 2016

Front-end Developer · Remote

- Worked on a large-scale advertising platform (AppNexus).
 - Built modular UI components using AngularJS with strong testing practices.
 - Contributed to frontend structure improvements and CSS organization.
 - Participated in Style Guide development.
 - Collaborated in distributed cross-functional teams.
 - After AppNexus, built a React-based administration UI for corporate security policies for another client engagement.
-

Independent Contractor

2013 – 2016

Frontend / JavaScript Developer (Short-term engagements) · Remote

- Worked on short-term frontend projects across different teams and products.
 - Built and improved UI using JavaScript and Angular-based applications.
 - Adapted quickly to different codebases and development environments.
 - Gained exposure to diverse workflows and engineering practices.
-
