About

Senior Software Engineer with 19+ years of experience building and evolving web products, with a strong focus on technical leadership, product thinking, system design, and AI-assisted workflows.

I work at the intersection of business, product, and engineering—translating complex needs into practical technical solutions, identifying trade-offs, and helping cross-functional teams move from ambiguity toward execution.

My recent work focuses on AI systems, workflow automation, integrations, and turning operational processes into software; I'm now seeking a Technical Project Manager opportunity where I can combine that engineering depth with product, requirements, and AI systems delivery.

INTERESTS

- Technical project and product delivery for complex software systems
- AI systems, workflow automation & process improvement
- Business-to-technical requirements translation
- System architecture, integrations & technical decision-making
- Roles combining engineering depth with project and product ownership

Experience

Independent Consulting & Product R&D

Apr 2026 – Present

Technical Product & AI Systems Consultant

- Partnered with Juana Casa, an architecture studio, to identify where AI could improve access to project and operational knowledge; translated those needs into an initial React/Next.js assistant with Mastra and RAG, then implemented specialized OpenAI Workspace Agents accessible through Slack and WhatsApp.
- Extended the knowledge-access work beyond Juana Casa into a broader product direction; currently developing a reusable knowledge-intelligence layer with grounded RAG and an authenticated MCP server that gives AI assistants and agents source-backed access to company documents and structured operational data.
- Designed, built, and launched **TuLanding**, taking a subscription product from hypothesis through implementation and release; developed its create → preview → subscribe journey with Astro/React and Cloudflare.
- Evaluated and refined AI-assisted product design and development workflows across discovery, prototyping, implementation, testing, and review, combining coding agents, design tools, and agent orchestration with explicit human verification throughout.
- Currently developing an adaptive multi-model AI system investigating whether combining independent models can improve answer quality and factual reliability under practical cost and latency constraints; built a research lab using LangGraph, implementing 14 distinct multi-model workflows with support for multiple AI providers, validated the end-to-end pipeline on a small test run, and began an exploratory evaluation using a public factuality benchmark (AA-Omniscience).

Rotunda Software

Apr 2022 – Apr 2026

Senior Frontend Engineer · Remote

- Acted as the main frontend reference across the team, supporting developers in UI-related decisions and implementation.
 - Collaborated with backend, design, QA, and marketing to define technical and product solutions, proactively identifying UX and implementation improvements.
 - Drove large-scale frontend refactors, including migrations of multiple applications and marketing sites.
 - Led the evolution of the internal UI library (ModUI), improving APIs, simplifying styling systems, and increasing consistency.
 - Worked within a microservices-based architecture using a custom internal frontend framework, implementing Node.js and Express API endpoints to support frontend features.
 - Built interactive documentation and standardized reusable UI patterns and styling conventions, improving onboarding, consistency, and design-to-development handoff.
 - Improved frontend tooling and local development workflows, reducing friction for the engineering team.
-

BairesDev

Mar 2020 – Mar 2022

Senior Frontend Engineer · Remote

- Worked on Pinterest's Experiments team, implementing and testing React UI variations in the core consumer product to support product experimentation.
 - Developed and owned the UI layer of internal advertising reporting tools, defining their information architecture and data presentation.
 - Expanded into backend responsibilities, learning Go and implementing APIs to deliver features end to end.
 - Collaborated in distributed teams and participated in code reviews and testing.
-

Mapme

Nov 2016 – Dec 2019

Senior Frontend Engineer · Remote

- Collaborated closely with the CTO and CEO, translating business needs into practical, user-friendly UI solutions, often without formal designs.
 - Helped evaluate and introduce Vue.js for a full product rewrite, then led the frontend implementation of the redesigned application from scratch.
 - Built a component-based architecture with Vue and Vuex, including reusable UI components designed for maintainability and scalability.
-

Deviget

Dec 2013 – Apr 2016

Front-end Developer · Remote

- Worked on a large-scale advertising platform (AppNexus).
 - Built modular UI components using AngularJS with strong testing practices.
 - Contributed to frontend structure improvements and CSS organization.
 - Participated in Style Guide development.
 - Collaborated in distributed cross-functional teams.
 - After AppNexus, built a React-based administration UI for corporate security policies for another client engagement.
-

Independent Contractor

2013 – 2016

Frontend / JavaScript Developer (Short-term engagements) · Remote

- Worked on short-term frontend projects across different teams and products.
 - Built and improved UI using JavaScript and Angular-based applications.
 - Adapted quickly to different codebases and development environments.
 - Gained exposure to diverse workflows and engineering practices.
-
