Professional Summary

Senior Software Engineer with 19+ years of experience spanning full-stack web development, deep frontend and product engineering, and a recent focus on Applied AI systems.

I build end-to-end AI products combining product thinking, frontend, backend, retrieval, integrations, and agent workflows to solve concrete operational problems.

I work autonomously from problem definition and experience design through implementation, evaluation, and iteration, applying senior engineering judgment in close collaboration with Product and Design.

FOCUS AREAS

- Applied AI systems and software engineering
- End-to-end AI product engineering
- RAG, document retrieval, and knowledge-intelligence workflows
- MCP integrations and AI agents
- LangGraph and multi-model orchestration

Skills

LLM Applications

Retrieval-Augmented Generation (RAG)

Embeddings

Vector Search

Hybrid Retrieval & Reranking

PostgreSQL & pgvector

Mastra

Agent Orchestration

Model Context Protocol (MCP)

LangGraph

AI Evaluation & Benchmarking

Product Discovery

TypeScript

JavaScript

React

Next.js

Node.js

API Integration

Experience

Independent Product R&D & AI Consulting

Apr 2026 – Present

Senior Software Engineer — Applied AI

- Partnered directly with Juana Casa's two founding partners and studio team to understand and define their needs around access to project and operational knowledge. From that discovery, I built the solution end to end: an initial React/Next.js AI assistant with Mastra and source-backed RAG, followed by specialized OpenAI Workspace Agents through Slack and WhatsApp.
 - The knowledge-access problem identified with Juana Casa inspired an independent AI knowledge-intelligence product I am developing for companies, with the studio set to serve as its first real-world implementation; I am building a reusable layer with source-backed RAG and an authenticated MCP server that gives AI assistants and agents access to company documents and structured operational data.
 - Developing an adaptive multi-model research system built with LangGraph; implemented 14 distinct multi-model workflows across multiple AI providers, validated the end-to-end pipeline on a small engineering test run, and began exploratory evaluation with AA-Omniscience under practical cost and latency constraints.
 - Evaluated and refined AI-assisted product design and development workflows, combining coding agents (Codex, Claude Code, Cursor), design tools (Claude Design, OpenDesign, Pen), and agent orchestration across discovery, prototyping, implementation, testing, and review, with explicit human verification throughout.
-

Rotunda Software

Apr 2022 – Apr 2026

Senior Frontend Engineer · Remote

- Worked within a microservices-based architecture using a custom internal frontend framework, implementing Node.js and Express API endpoints to support frontend features.
 - Led the evolution of the internal UI library (ModUI), improving APIs, simplifying styling systems, and increasing consistency.
 - Drove large-scale frontend refactors, including migrations of multiple applications and marketing sites.
 - Acted as the main frontend reference across the team, supporting developers in UI-related decisions and implementation.
 - Collaborated with backend, design, QA, and marketing to define technical and product solutions, implementing features from Figma designs and proactively identifying UX and implementation improvements.
-

BairesDev

Mar 2020 – Mar 2022

Senior Frontend Engineer · Remote

- Worked on Pinterest's Experiments team, implementing and testing React UI variations in the core consumer product to support product experimentation.
 - Developed and owned the UI layer of internal advertising reporting tools, defining their information architecture and data presentation.
 - Expanded into backend responsibilities, learning Go and implementing APIs to deliver features.
 - Collaborated in distributed teams and participated in code reviews and testing.
-

Mapme

Nov 2016 – Dec 2019

Senior Frontend Engineer · Remote

- Helped evaluate and introduce Vue.js for a full product rewrite, then led the frontend implementation of the redesigned application from scratch.
 - Built a component-based architecture with Vue and Vuex, including reusable UI components designed for maintainability and scalability.
 - Collaborated closely with the CTO and CEO, translating business needs into practical, user-friendly UI solutions, often without formal designs.
-

Deviget

Dec 2013 – Apr 2016

Frontend Developer · Remote

- Worked on a large-scale advertising platform (AppNexus).
 - Built modular UI components using AngularJS with strong testing practices.
 - Contributed to frontend structure improvements and CSS organization.
 - Participated in Style Guide development.
 - Collaborated in distributed cross-functional teams.
 - After AppNexus, built a React-based administration UI for corporate security policies for another client engagement.
-

Vulsai

2012 – 2013

Frontend Developer · Buenos Aires, AR

- Primary frontend developer across multiple projects.
 - Introduced modern CSS tooling (Sass, Less, Compass), improving maintainability and structure of styles.
 - Built data visualization interfaces using D3.js.
 - Developed self-contained embeddable widgets.
 - Collaborated closely with design.
-

Earlier full-stack experience across four roles building web applications end-to-end with frontend, backend, APIs, databases, and infrastructure.
