About

Senior Software Engineer with a frontend and full-stack foundation and a product-engineering perspective, now focused on applied AI systems that connect software engineering, retrieval, integrations, and agent workflows to concrete operational problems.

I have built and investigated systems using React/Next.js, Mastra, source-backed RAG, authenticated MCP, specialized agents, and Quorum multi-model orchestration, keeping prototypes, ongoing development, and exploratory evaluation clearly distinct.

My work combines engineering judgment with product context: understanding the source data, defining useful system boundaries, making integrations reliable, and keeping AI-assisted workflows observable and human-verified.

INTERESTS

- Applied AI systems and software engineering
- RAG, document retrieval, and knowledge-intelligence workflows
- MCP integrations and AI agents
- LangGraph and multi-model orchestration
- Senior Software Engineering roles focused on applied AI

Skills

Retrieval-Augmented Generation (RAG)

Mastra

AI Agents

MCP Integrations

LangGraph

Model Routing & Orchestration

Multi-model Workflows

AI Evaluation & Benchmarking

TypeScript

JavaScript

React

Next.js

Node.js

API Integration

Microservices

Technical Documentation

Experience

Independent Product R&D & AI Consulting

Apr 2026 – Present

Senior Software Engineer — Applied AI

- Partnered with Juana Casa, an architecture studio, to identify where AI could improve access to project and operational knowledge; built an initial React/Next.js assistant with Mastra and source-backed RAG, then implemented specialized OpenAI Workspace Agents accessible through Slack and WhatsApp.
 - The knowledge-access problem identified with Juana Casa inspired Ground, an independent product currently in development with the goal of implementing it at the studio; I am building a reusable layer with source-backed RAG and an authenticated MCP server that gives AI assistants and agents access to company documents and structured operational data.
 - Developing Quorum, an adaptive multi-model research system built with LangGraph; implemented 14 distinct multi-model workflows across multiple AI providers, validated the end-to-end pipeline on a small engineering test run, and began exploratory evaluation with AA-Omniscience under practical cost and latency constraints.
 - Evaluated and refined AI-assisted product design and development workflows, combining coding agents (Codex, Claude Code, Cursor), design tools (Claude Design, OpenDesign, Pen), and agent orchestration across discovery, prototyping, implementation, testing, and review, with explicit human verification throughout.
-

Rotunda Software

Apr 2022 – Apr 2026

Senior Frontend Engineer · Remote

- Worked within a microservices-based architecture using a custom internal frontend framework, implementing Node.js and Express API endpoints to support frontend features.
 - Led the evolution of the internal UI library (ModUI), improving APIs, simplifying styling systems, and increasing consistency.
 - Drove large-scale frontend refactors, including migrations of multiple applications and marketing sites.
 - Acted as the main frontend reference across the team, supporting developers in UI-related decisions and implementation.
 - Collaborated with backend, design, QA, and marketing to define technical and product solutions, proactively identifying UX and implementation improvements.
-

BairesDev

Mar 2020 – Mar 2022

Senior Frontend Engineer · Remote

- Worked on Pinterest's Experiments team, implementing and testing React UI variations in the core consumer product to support product experimentation.
 - Developed and owned the UI layer of internal advertising reporting tools, defining their information architecture and data presentation.
 - Expanded into backend responsibilities, learning Go and implementing APIs to deliver features end to end.
 - Collaborated in distributed teams and participated in code reviews and testing.
-

Mapme

Nov 2016 – Dec 2019

Senior Frontend Engineer · Remote

- Helped evaluate and introduce Vue.js for a full product rewrite, then led the frontend implementation of the redesigned application from scratch.
 - Built a component-based architecture with Vue and Vuex, including reusable UI components designed for maintainability and scalability.
 - Collaborated closely with the CTO and CEO, translating business needs into practical, user-friendly UI solutions, often without formal designs.
-

Deviget

Dec 2013 – Apr 2016

Frontend Developer · Remote

- Worked on a large-scale advertising platform (AppNexus).
 - Built modular UI components using AngularJS with strong testing practices.
 - Contributed to frontend structure improvements and CSS organization.
 - Participated in Style Guide development.
 - Collaborated in distributed cross-functional teams.
 - After AppNexus, built a React-based administration UI for corporate security policies for another client engagement.
-

Vulsai

2012 – 2013

Frontend Developer · Buenos Aires, AR

- Primary frontend developer across multiple projects.
 - Introduced modern CSS tooling (Sass, Less, Compass), improving maintainability and structure of styles.
 - Built data visualization interfaces using D3.js.
 - Developed self-contained embeddable widgets.
 - Collaborated closely with design.
-

Earlier full-stack experience across four roles building web applications end-to-end with frontend, backend, APIs, databases, and infrastructure.
