About

Senior Frontend/Product Engineer with 19+ years of experience building product-focused web applications, combining frontend architecture, UI systems, and product thinking to turn complex problems into clear, effective user experiences.

I work beyond implementation, helping define product and technical solutions, improving architecture, creating reusable UI patterns, and simplifying complexity to help teams move faster.

I've often acted as a frontend reference across teams, driving refactors, improving design-to-development workflows, and contributing to product, UX, and technical decisions.

INTERESTS

- Product-focused frontend engineering
- Frontend architecture & system design
- Design systems & reusable UI patterns
- AI-assisted development workflows
- Senior Frontend or Product Engineering roles with strong product and technical impact

Experience

Independent Product R&D & AI Consulting

Apr 2026 – Present

Senior Frontend / Product Engineer

- Designed, built, and launched TuLanding, a subscription product testing whether custom landing-page development can become a repeatable, productized service through AI and automation; implemented the create → preview → subscribe journey with Astro/React and Cloudflare.
 - Partnered with Juana Casa, an architecture studio, to identify how AI could improve access to project and operational knowledge; built an initial assistant prototype with React/Next.js, Mastra, RAG, and the Vercel AI SDK.
 - Adapted the solution to the studio's preferred workflows by implementing specialized OpenAI Workspace Agents accessible through Slack and WhatsApp, with permission-aware Google Drive access and human approval boundaries; currently developing an MCP/RAG server to improve documentation retrieval.
 - Investigated whether deliberation across multiple AI models could support a more useful and transparent second-opinion experience; built a React/Next.js and TypeScript prototype orchestrating a three-stage protocol—independent responses, cross-model debate, and final synthesis—with agreement and dissent made visible to the user.
 - Systematically evaluated and refined AI-assisted development workflows using Codex, Claude Code, Cursor, and agent-orchestration tooling, applying them across product discovery, implementation, testing, and code review while maintaining explicit human verification checkpoints.
-

Rotunda Software

Apr 2022 – Apr 2026

Senior Frontend Engineer · Remote

- Acted as the main frontend reference across the team, supporting developers in UI-related decisions and implementation.
 - Led the evolution of the internal UI library (ModUI), improving APIs, simplifying styling systems, and increasing consistency.
 - Drove large-scale frontend refactors, including migrations of multiple applications and marketing sites.
 - Built interactive documentation and standardized reusable UI patterns and styling conventions, improving onboarding, consistency, and design-to-development handoff.
 - Improved frontend tooling and local development workflows, reducing friction for the engineering team.
 - Collaborated with backend, design, QA, and marketing to define technical and product solutions, proactively identifying UX and implementation improvements.
 - Worked within a microservices-based architecture using a custom internal frontend framework, implementing Node.js and Express API endpoints to support frontend features.
-

BairesDev

Mar 2020 – Mar 2022

Senior Frontend Engineer · Remote

- Worked on Pinterest's Experiments team, implementing and testing React UI variations in the core consumer product to support product experimentation.
 - Developed and owned the UI layer of internal advertising reporting tools, defining their information architecture and data presentation.
 - Expanded into backend responsibilities, learning Go and implementing APIs to deliver features end to end.
 - Collaborated in distributed teams and participated in code reviews and testing.
-

Mapme

Nov 2016 – Dec 2019

Senior Frontend Engineer · Remote

- Helped evaluate and introduce Vue.js for a full product rewrite, then led the frontend implementation of the redesigned application from scratch.
 - Built a component-based architecture with Vue and Vuex, including reusable UI components designed for maintainability and scalability.
 - Collaborated closely with the CTO and CEO, translating business needs into practical, user-friendly UI solutions, often without formal designs.
-

Deviget

Dec 2013 – Apr 2016

Front-end Developer · Remote

- Worked on a large-scale advertising platform (AppNexus).
 - Built modular UI components using AngularJS with strong testing practices.
 - Contributed to frontend structure improvements and CSS organization.
 - Participated in Style Guide development.
 - Collaborated in distributed cross-functional teams.
 - After AppNexus, built a React-based administration UI for corporate security policies for another client engagement.
-

Independent contractor

2013 – 2016

Frontend / JavaScript Developer (Short-term engagements) · Remote

- Worked on short-term frontend projects across different teams and products.
 - Built and improved UI using JavaScript and Angular-based applications.
 - Adapted quickly to different codebases and development environments.
 - Gained exposure to diverse workflows and engineering practices.
-
